Front-End Web Developer with a proven background in biological research and clinical work. Successfully graduated the University of Washington full-stack coding bootcamp. A pragmatic professional with a solid comprehension of HTML, CSS, and Bootstrap creating websites while applying my expert experience of JavaScript to add functionality. Looking to apply my front-end development experience and expertise in new ways to maximize efficiency while ensuring the quality of the users' interaction.

Areas of Expertise

Front-End: HTML, CSS, Bootstrap, Materialize, JavaScript, jQuery, AJAX, Firebase

Back-End: Node.js

Projects and Applications

EntertainMe

- A client-side application that suggests activities based on location, date and category inputs
- UI/UX designer in a group of four
- Built with Materialize and Algolia Places library and utilizes Eventful and Google Maps APIs
- <https://ethanpfisher.github.io/Project1/>

GifTastic

- A simple website with the intent of acting as a visual and auditory introduction to K-POP
- Sole contributor to the project
- Built with Bootstrap, jQuery UI, and Download.js
- Utilizes GIPHY and YouTube APIs and local storage
- <https://joverlee521.github.io/GifTastic/>

One Piece RPG

- A role-playing game that is based on a popular Japanese anime One Piece
- Sole contributor to the project
- Built with Bootstrap and jQuery
- <https://joverlee521.github.io/One-Piece-RPG/>
